### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: This application teaches an ink jet ink comprising at least one dye having a heterocyclic ring and a metal ion, an aqueous medium and a compound capable of accelerating aggregation of the dye in the aqueous medium such as a heterocyclic or chain-like low molecular weight compound that may be substituted with a hydroxy group, an amino group or a thiazolyl group. The closest prior art of record is U.S. Patent No. 6,582,501, issued to Ryu et al., which teaches an ink composition comprising a phthalocyanine dye in an aqueous medium and a nitrogen-containing heterocyclic compound as an additive. The nitrogen-containing heterocyclic compound is added to enhance the solubility of the dye in the aqueous medium so that the dye can remain dispersed without aggregation and precipitation of the dye. It is the examiner's position that it would not have been obvious that the nitrogen-containing heterocyclic compound of Ryu et al. would accelerate the aggregation of the dye in the aqueous medium as claimed by applicants since Ryu et al. specifically state that the addition of the nitrogen-containing heterocyclic compound does not cause aggregation of the dye. Accordingly, this application is allowable.

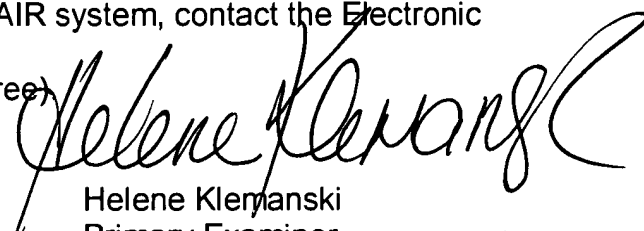

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
